SCAM DECODED · TEAM TRAINING PACK

Spot It, Stop It

Facilitator guide for a 45-minute scam awareness session for small businesses and teams. No security background needed.

- Editable slide deck with speaker notes (PPTX + PDF)
- This guide: prep, agenda, scenario answers, templates
- 12-question quiz and answer key
- Editable certificate and a "Verify before you pay" poster

Licensed for internal use by one organization (any number of employees). Please don't resell or publish the materials. General education, not legal, security-compliance or financial advice. All example emails, names and domains are fictional.

BEFORE THE SESSION

Prep checklist (30 minutes)

Most of the value comes from tailoring three slides to your company.

- [ ] **Slide 18 · Reporting:** replace the placeholder with how people report here (an email address, a Slack channel, a phone extension).
- [ ] **Slide 9 · Invoice fraud:** say who gives the second approval for new payees and bank changes. No rule yet? Use the policy template on page 5.
- [ ] **Slide 2 · Why this matters:** check the latest FBI IC3 annual report figure for business email compromise and say it out loud.
- [ ] **Ask a manager** to attend and say, during slide 16, "Calling me to check a request is exactly what I want."
- [ ] **Print** the quiz (one per person), certificates, and the poster for the break room or near whoever pays invoices.
- [ ] **Optional:** collect one real (anonymised) scam message your company received. Real examples land best.

Who should attend

Everyone with an email address, and especially anyone who pays invoices, runs payroll, manages suppliers, or has admin access. New hires should take it in their first month. Repeat it once a year.

Room and setup

Any screen works. In person is best for the scenario discussions; on a video call, use breakout rooms of 2–3 for the scenarios. Open the PPTX in presenter view so you can see the speaker notes.

> **Tone matters most.** Nobody should leave feeling foolish. Celebrate anyone who shares a near miss. The aim is a team that reports fast, without fear.

RUNNING ORDER

Agenda: 45 minutes

#	Slide	Min
1	Spot It, Stop It	1
2	Scams aimed at businesses are a people problem, not a tech problem	2
3	What we'll cover	1
4	Every scam has the same 3 tells	3
5	Email and messages	–
6	5 red flags in one email	2
7	Spot the fake: what's wrong here?	3
8	The “boss” who needs gift cards	2
9	Invoice and vendor payment fraud	2
10	Payroll diversion and W-2 requests	2
11	Phone, voice and video	–
12	The fake IT call and the code request	2
13	Voice clones and deepfake calls	2
14	Smishing and QR codes	2
15	Protect yourself and the company	–
16	Stop. Verify on a known channel. Then act.	2
17	4 habits that block most account takeovers	2
18	How to report something here	2
19	I clicked, or I paid. Now what?	2
20	The urgent invoice	2
21	The call from IT	2
22	The manager on the road	2
23	Quiz: 12 questions, 5 minutes	5
24	The 5 rules	1
25	Thank you	1

SCENARIOS

Scenario answers

Read the scenario, give pairs 60 seconds, take two or three answers, then share the model answer.

Scenario 1 of 3: The urgent invoice

It's 4:45 pm on Friday. An email from a supplier you use every month says their bank account has changed and this month's invoice must be paid to the new account today, or they'll stop deliveries. The email address looks right. What do you do?

Model answer. don't change anything from the email. Call the supplier on the number in our supplier file (not the email), confirm the change, and follow our two-person approval for bank changes. If you can't reach them before close, the payment waits until Monday. A real supplier will understand.

Scenario 2 of 3: The call from IT

Your phone rings. "Hi, this is Sam from IT. We've spotted suspicious sign-ins on your account and we're locking it down. I've just sent you a code, can you read it back so I can confirm it's you?"

Model answer. never read out the code. Hang up and contact IT through the usual route. A real IT team never needs your code. The fact they're asking means someone else is trying to sign in as you. Report it.

Scenario 3 of 3: The manager on the road

A text from your manager's name: "In back-to-back meetings, can't talk. Need 5 x $200 gift cards for a client thank-you before 3pm. Send me photos of the codes and I'll sort the expense later. Keep it a surprise."

Model answer. all three tells, rush, secrecy and an unusual payment. Don't buy anything. Call your manager on the number you already have, or ask someone who can reach them. Then report the message.

> **If someone shares a real incident:** thank them, keep details anonymous, and don't let the room judge. Follow up privately if it's not yet reported.

TEMPLATE · ADAPT AND ADOPT

Payment and data verification policy

A one-page policy most small businesses can adopt as-is. Fill in the blanks and share it after the session.

1. **Bank detail changes.** Any change to a supplier's, customer's or employee's bank details is confirmed by phone using contact details we already hold, never details in the request. The person who verified it records the date, the number called and who they spoke to.
2. **New payees and changes** are approved by a second person: _____
3. **Payments over $**_____ need a second approval, however urgent the request.
4. **Gift cards** are never bought because of an email or text request. Gift card purchases need written approval from _____
5. **Employee data** (W-2s, pay slips, Social Security numbers) is only sent after confirming the request in person or by phone.
6. **Codes and sign-in prompts.** Nobody at this company, including IT, will ask you for a one-time code or to approve a sign-in you didn't start.
7. **Reporting.** Report suspicious messages and mistakes to _____ as soon as possible. Reporting early is always the right thing to do. Nobody is disciplined for reporting a mistake in good faith.

Approved by _____ Date _____

AFTER THE SESSION

Follow-up emails (copy and paste)

Same day · "Thanks, and the 5 rules"

Thanks for joining today's scam awareness session. The five rules, for your desk:

1. Two tells (rush, secrecy, unusual request)? Stop.
2. Verify on a channel you already have.
3. Never share a code or approve a prompt you didn't start.
4. Bank changes and new payees: phone check + second approval.
5. Report fast. No blame.

Report anything suspicious to [reporting route].

Two weeks later · "One question"

Quick check-in from the scam awareness session: has anyone had a suspicious message since? If you reported one, thank you. If you weren't sure whether to report something, the answer is always yes: [reporting route].

Monthly · "Scam of the month"

This month's scam to watch for: [one-line description]. The tell: [the giveaway]. What to do: verify on a known channel and report to [reporting route].

Tip: Scam Decoded posts one scam decoded every day; pick one that fits your business.

RECORDS

Attendance and quiz log

Keep a simple record of who completed training. Some insurers and clients ask for it.
